

FACTSHEET

Drooms platform for RFP & tender management

Key challenges

- **No purpose-built infrastructure** for managing multiple bidders, large documentation volumes and controlled access outside email and spreadsheets
- **Regulatory deadlines** requiring verifiable, time-boxed submission windows
- **Retention obligations** once the tender closes, requiring a defensible, permanent record

How it works

- **Consultation:** publish requirements to all vendors at once with view only rights, run RFP Q&A centrally, track engagement to spot serious bidders early.
- **Response:** each vendor can work in an isolated folder or upload data via email. Submissions freeze at cutoff and every upload is timestamped.
- **Selection:** revoke access instantly for eliminated vendors, collect KYC from the shortlist, cross-colaborate with internal teams when reviewing submissions.
- **Archive:** retain the full process record, documents, logs, and Q&A, for audit or dispute resolution.

Features and outcomes

Capability	Outcome
Q&A	Structured and efficient, no vendor sees another's questions
Granular Permissions	Each vendor only sees, downloads and prints what they are permitted to
Live Reporting	Real-time activity reports can be downloaded, keeping the process transparent for regulators and acting as an audit trail
Instant Access Revocation	No residual exposure for eliminated bidders
Advanced AI	Fully integrated into the platform, supporting efficient document organisation and review
Certified Archive	Full governance record retained after closure, available digitally or USB.

Security and compliance

100% European digital sovereignty, ISO 27001:2022 and ISO 27018:2020 certified, full GDPR compliance and hosted on georedundant EU servers with full access logging.
